

DNA Labs International, Inc. offers more than 25 years experience in forensic serology and DNA analysis - from identification of biological fluids to DNA fingerprinting. To provide our worldwide clients and partners with exceptional quality service, we use the latest technology - Polymerase Chain Reaction (PCR), Short Tandem Repeats (STR) and real-time PCR - to identify and test DNA and analyze the results. As the only private DNA lab with board certified forensic DNA fellows, we demonstrate our commitment to quality by assuring that every test is reviewed by team members who hold certification from the American Board of Criminalistics (ABC).

In the process of obtaining accreditations from:

FQS-I
(Forensic Quality Services International)

AABB
(American Association of Blood Banks)

Services

Paternity Testing

We conduct genetic testing for parentage, siblingship, grandparent/aunt/uncle relationships and twin zygosity. These test results are used in areas such as the determination of familial relationships, immigration and adoption.

Bodily Fluid Identification

DNA Labs International conducts bodily fluid genetic profiles to be used in cases of infidelity or assault.

Y-Chromosome STR Testing

Y-STR comparative analysis is used in determining relationships between paternal genetic lines.

Quantification and Screening

Prior to analysis, we carry out a screening and quantification process to confirm the presence or establish the possible absence of DNA. This prevents the testing of non-valid samples, reducing the cost to our clients.

Forensic DNA Sample Analysis

DNA Labs International provides local, state and federal crime labs with outsourced accredited DNA forensic analysis to help solve cold cases and work convicted offender samples for inclusion in the national database.

Expert Testimony

We provide court-qualified experts in the field of DNA for case review and re-analysis in state, federal and international courts of law.

DNA Casework Technical Review

All cases are independently reviewed by a second qualified DNA analyst to ensure accuracy and top quality results.

Training Classes

DNA Labs International provides equipment training for Applied Biosystems Real-Time PCR, multi-capillary PRISM® Genetic Analyzer and DNA analyst lab training with certification for preliminary examination of bodily fluids, extraction, quantification, amplification, data analysis including GeneMapper® and statistical interpretation.

Kits and Instrumentation Validation

Validation services customized for individual labs meeting SWGDAM and ISO guidelines provide detailed Standard Operation Procedures (SOP) with validation write-up summaries, safety procedure manuals, quality assurance manuals and maintenance guidelines. Validation is provided for AB thermal cycler, multi-capillary and all real-time PCR instruments.

DNA Labs International provides validation services for AB's Profiler Plus®, COfiler®, Identifiler®, Promega's PowerPlex® 16, AB and Promega's Y-STR system, Human Quantifiler™, Y Quantification Kits and any robotic platform including Tecan, PerkinElmer, Beckman Coulter and Qiagen.
